

ANDRES MERCADO

Full Stack Software Engineer

andresam321@proton.me • <https://www.linkedin.com/in/andres-merc/>

Summary

Full-stack engineer focused on backend systems, AI-powered workflows, and document intelligence platforms. Experience building async Python services, OCR pipelines, semantic search systems, and PostgreSQL-backed applications. Recently completed a backend engineering contract at Stacksync and built Propia, an AI-powered lease intelligence platform for document analysis and compliance workflows.

Experience

Propia | Live Demo — <https://propia-demo.vercel.app/>

Full-Stack Engineer

10/2025 - Present

- Developed and deployed a multi-service system for lease ingestion, OCR processing, and real-time document Q&A
- Architected an AI-powered lease intelligence platform for OCR processing, semantic search, compliance analysis, and real-time document Q&A
- Engineered asynchronous document-processing workflows across API, OCR, embedding, and AI analysis services, enabling concurrent lease processing and querying
- Implemented embedding-based semantic search and LLM-powered querying over OCR-processed lease documents, achieving ~90–96% OCR text coverage for reliable downstream analysis
- Built a multi-service architecture separating API, OCR, and AI analysis workloads to support scalable document ingestion and processing

Owner

Real Estate (Part-Time)

10/2018 - Present

- Managed rental properties end-to-end, handling tenant operations, maintenance workflows, and real-world logistics under ambiguous conditions
- Coordinated contractors, timelines, and budgets, developing strong decision-making and problem-solving skills
- Handled rent tracking, maintenance requests, and tenant communication, ensuring consistent day-to-day operations

Stacksync

Backend Engineer

06/2025 - 09/2025

- Built stateless API integrations powering production workflows, reducing API integration setup time from ~3 weeks to ~1 day
- Engineered schema-driven integrations across external APIs, adapting request/response structures for varying integration requirements
- Adapted integration logic to handle inconsistencies and gaps in external API documentation, ensuring reliable connector behavior across services

AeroSkyOps | GitHub — <https://github.com/andresam321/AeroSkyOps>

Full-Stack Engineer

04/2022 - 07/2024

Built and deployed a full-stack aviation operations platform to streamline aircraft assignments, fuel workflows, weather integrations, and flight tracking.

- Designed the platform after identifying inefficiencies in spreadsheet-based airport operations while working as a line service technician
- Engineered REST APIs and PostgreSQL-backed services supporting aircraft parking assignments, fuel requests, and operational tracking
- Integrated FlightAware and weather APIs into operational workflows, providing real-time operational visibility
- Streamlined airport processes by replacing manual spreadsheet-based tracking with centralized system-driven workflows

Skills

AI & Technologies: OpenAI APIs • PaddleOCR • Semantic Search

Languages: Python • JavaScript • SQL

Databases: PostgreSQL • SQLite • MongoDB

Cloud & DevOps: AWS (EC2, S3) • Google Cloud Run • Docker • Nginx

Frameworks: FastAPI • Flask • Express • React • Redux • Async SQLAlchemy

Languages

English Native ●●●●●

Spanish Native ●●●●●

Training / Courses

App Academy — Software Engineering

Python, MERN Stack — Coding Dojo
