

Andres Mercado

Full-Stack Software Engineer

andresam321@proton.me | [510-695-4124](tel:510-695-4124) | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | San Francisco Bay Area, CA

Full-stack software engineer with deeper backend experience in Python, FastAPI, and PostgreSQL. Built and deployed full-stack applications with React and LLM-based document and outreach workflows on AWS.

SKILLS

Languages: Python, JavaScript, SQL

Frameworks: FastAPI, Flask, SQLAlchemy, React, Redux, Vite

Databases: PostgreSQL, SQLite

Cloud & DevOps: AWS, Docker, Caddy, Route 53, S3

AI & Data: OpenAI APIs, RAG, Embeddings, Structured Outputs, OCR

Integrations & Auth: REST APIs, Google OAuth, Gmail API

Spoken Languages: English, Spanish

EXPERIENCE

Backend Engineer (Contract) — *Stacksync (YC W24)* June 2025 – September 2025

- Built API connectors for Stacksync's real-time CRM/database sync platform, integrating external services such as Firecrawl and NeverBounce
- Designed schema-driven data mapping to normalize inconsistent external API data into the structure Stacksync's sync engine expected
- Reduced connector build time in my own workflow from roughly three weeks for the first connector to about one day for later ones, after developing a repeatable structuring/mapping pattern

INDEPENDENT ENGINEERING

ContextFlow — *Full-Stack Software Engineer* | [Live](#) May 2026 – Present

Early-stage outreach platform; I build, deploy, and operate it myself.

- Built a FastAPI/PostgreSQL/React platform with a database-backed job system for background processing: separate worker process, automatic retries with backoff, and recovery of jobs abandoned by crashed workers
- Designed audience-specific LLM prompt orchestration for recruiters, hiring managers, founders, peers, and executives, with an automated check that flags generated claims the source context doesn't support
- Integrated Google OAuth, Gmail, and Resend for authenticated per-user sends and platform-level transactional email; deployed on AWS with Docker Compose and Caddy (automatic HTTPS), with scripted deploys and database migrations

Propia — *Lease Intelligence Platform* October 2025 – September 2026

Backend-first platform. Built and deployed; backend/database intentionally stopped — not currently live.

- Built a document-ingestion pipeline with a separate OCR worker and structured lease-fact extraction, including a review/confirmation step before extracted data is treated as fact
- Implemented embeddings-based retrieval powering direct lease Q&A, validated with a dedicated evaluation harness rather than assuming output quality
- Built a California-specific compliance rules engine checking lease terms against state rules, plus security fixes (login-timing leak, token-expiry bug, fail-fast production config checks)

ADDITIONAL EXPERIENCE

Line Service Technician — *Rabbit Aviation* September 2017 – August 2023

Fueled aircraft and coordinated day-to-day operations with pilots and customers at a general aviation airport.

EDUCATION

Software Engineering — *App Academy* June 2024

MERN Stack / Software Development — *Coding Dojo* April 2022
